

St Mary's Catholic Voluntary Academy KS1 Calculation Policy 2020

Mission Statement:

By working together at St Mary's School we aim through Jesus Christ to share God's love, helping our community to learn, grow and make a difference.

Rational:

Our aim at St Mary's school is to provide children with a sound foundation of knowledge and understanding of mathematics through a happy, secure and stimulating environment in which all are valued and encouraged to care for others and look for excellence in all they do. We recognise that mathematics is a tool for everyday life – children require the concepts and skills which can be used to analyse and communicate information and ideas and to tackle a range of practical tasks and real-life problems. Maths also provides the means for investigating ideas and developing thinking skills.

Our Aims:

The academy aims to:

- Provide a relevant, challenging and enjoyable mathematics curriculum for all children.
- Meet the requirements of the National Curriculum with a programme of study that gives particular emphasis to numeracy skills.
- Promote mathematics as an essential element of communication, which allows children to describe, illustrate, interpret, predict and explain.
- Provoke an appreciation of the relationships within mathematics; that mathematics is not an arbitrary collection of rules and disconnected items.
- Explore with children the fascination of mathematics and promote a way of working mathematically which harnesses their imaginations and initiative.
- Build children's confidence in mathematics by creating a supportive and inclusive culture in the classroom.
- Encourage children to work systematically and to show an appreciation for accuracy, clarity and meaning.
- Encourage and provide opportunities for children to work both independently and collaboratively.

Calculations:

This policy is designed to give a clear and progressive route through the methods, which children will learn whilst at St Mary's.

Pupils will learn the methods for each operation in order, and will only move on to the next 'Step' once they have demonstrated clearly their understanding of the mathematics behind the method, and their ability to use and apply the method in order to solve contextual, 'real life' mathematical problems.

The methods are <u>not</u> based upon academic levels or year groups - they should be used to help personalise children's learning, and children should not be moved on arbitrarily.

These methods of calculation should be supported, where appropriate, with a broad range of resources, ensuring that children are familiar with multiple representations of mathematical concepts.

The following pages show the Power Maths progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum.

The consistent use of the CPA (concrete, pictorial, abstract) approach across Power Maths helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting. but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with 15 - 3 and 15 - 13, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods.

In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.

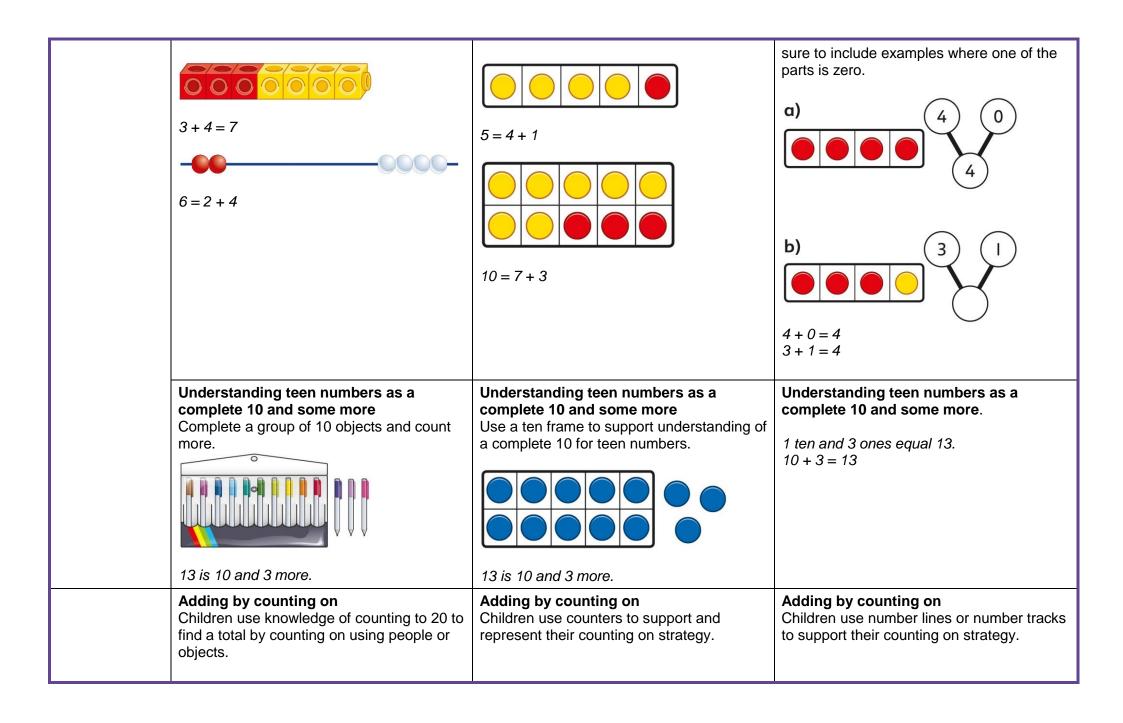

Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division.

They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.

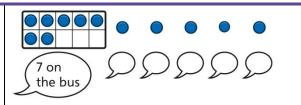

Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.

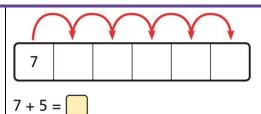

Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.

	Year 1				
	Concrete	Pictorial	Abstract		
Year 1 Addition	Counting and adding more Children add one more person or object to a group to find one more.	Counting and adding more Children add one more cube or counter to a group to represent one more.	Counting and adding more Use a number line to understand how to link counting on with finding one more.		
		0000	one more 0 1 2 3 4 5 6 7 8 9 10		
		One more than 4 is 5.	One more than 6 is 7. 7 is one more than 6.		
			Learn to link counting on with adding more than one. 1		
	Understanding part-part-whole relationship Sort people and objects into parts and understand the relationship with the whole.	Understanding part-part-whole relationship Children draw to represent the parts and understand the relationship with the whole.	Understanding part-part-whole relationship Use a part-whole model to represent the numbers.		
			6 4 6 + 4 = 10		
	The parts are 2 and 4. The whole is 6.	The parts are 1 and 5. The whole is 6.	6 + 4 = 10		
	Knowing and finding number bonds within 10 Break apart a group and put back together to find and form number bonds.	Knowing and finding number bonds within 10 Use five and ten frames to represent key number bonds.	Knowing and finding number bonds within 10 Use a part-whole model alongside other representations to find number bonds. Make		

Adding the 1s

Children use bead strings to recognise how to add the 1s to find the total efficiently.

$$2 + 3 = 5$$

 $12 + 3 = 15$

Adding the 1s

Children represent calculations using ten frames to add a teen and 1s.

$$3 + 5 = 8$$

So. $13 + 5 = 18$

Adding the 1s

2 + 3 = 5 12 + 3 = 15

Bridging the 10 using number bonds

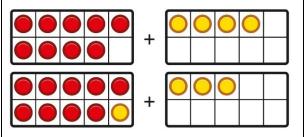

Children use a bead string to complete a 10 and understand how this relates to the addition.

7 add 3 makes 10. So, 7 add 5 is 10 and 2 more.

Bridging the 10 using number bonds

Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.

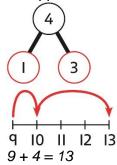

Bridging the 10 using number bonds

Use a part-whole model and a number line to support the calculation.

Children recognise that a teen is made from

a 10 and some 1s and use their knowledge of addition within 10 to work efficiently.

Year 1 Subtraction

Counting back and taking away

Children arrange objects and remove to find how many are left.

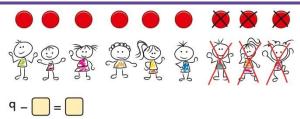

Counting back and taking away

Children draw and cross out or use counters to represent objects from a problem.

Counting back and taking away

Children count back to take away and use a number line or number track to support the method.

1 less than 6 is 5. 6 subtract 1 is 5.

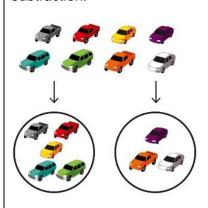

$$9 - 3 = 6$$

Finding a missing part, given a whole and a part

Children separate a whole into parts and understand how one part can be found by subtraction.

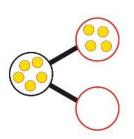

$$8 - 5 = ?$$

Finding a missing part, given a whole and a part

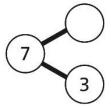

There are children left.

Children represent a whole and a part and understand how to find the missing part by subtraction.

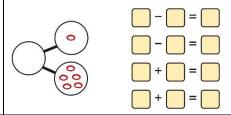

Finding a missing part, given a whole and a part

Children use a part-whole model to support the subtraction to find a missing part.

7 - 3 = ?

Children develop an understanding of the relationship between addition and subtraction facts in a part-whole model.

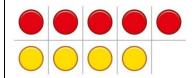

Finding the difference

Arrange two groups so that the difference between the groups can be worked out.

Finding the difference

Represent objects using sketches or counters to support finding the difference.

Finding the difference

Children understand 'find the difference' as subtraction.

1	7	1	*	
-				

8 is 2 more than 6. 6 is 2 less than 8. The difference between 8 and 6 is 2. 5 - 4 = 1

The difference between 5 and 4 is 1.

10 - 4 = 6

The difference between 10 and 6 is 4.

Subtraction within 20

Understand when and how to subtract 1s efficiently.

Use a bead string to subtract 1s efficiently.

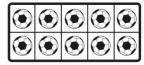

$$5-3=2$$

 $15-3=12$

Subtraction within 20

Understand when and how to subtract 1s efficiently.

$$5 - 3 = 2$$

 $15 - 3 = 12$

Subtraction within 20

Understand how to use knowledge of bonds within 10 to subtract efficiently.

$$5 - 3 = 2$$

 $15 - 3 = 12$

Subtracting 10s and 1s

For example: 18 - 12

Subtract 12 by first subtracting the 10, then the remaining 2.

First subtract the 10, then take away 2.

Subtracting 10s and 1s

For example: 18 - 12

Use ten frames to represent the efficient method of subtracting 12.

First subtract the 10, then subtract 2.

Subtracting 10s and 1s

Use a part-whole model to support the calculation.

$$19 - 14$$
 $19 - 10 = 9$
 $9 - 4 = 5$

So,
$$19 - 14 = 5$$

Subtraction bridging 10 using number bonds

For example: 12 - 7

Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.

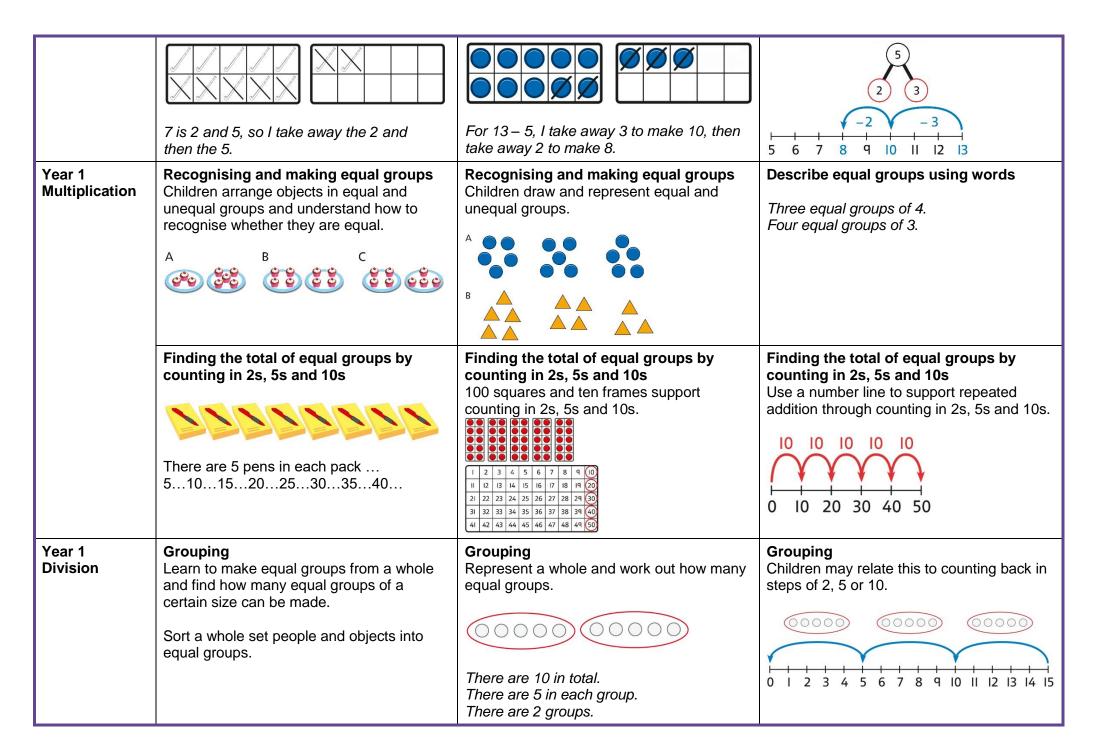

Subtraction bridging 10 using number bonds

Represent the use of bonds using ten frames.

Subtraction bridging 10 using number bonds

Use a number line and a part-whole model to support the method.

13 - 5

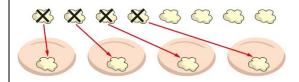

There are 10 children altogether. There are 2 in each group. There are 5 groups.

Sharing

Share a set of objects into equal parts and work out how many are in each part.

Sharing

Sketch or draw to represent sharing into equal parts. This may be related to fractions.

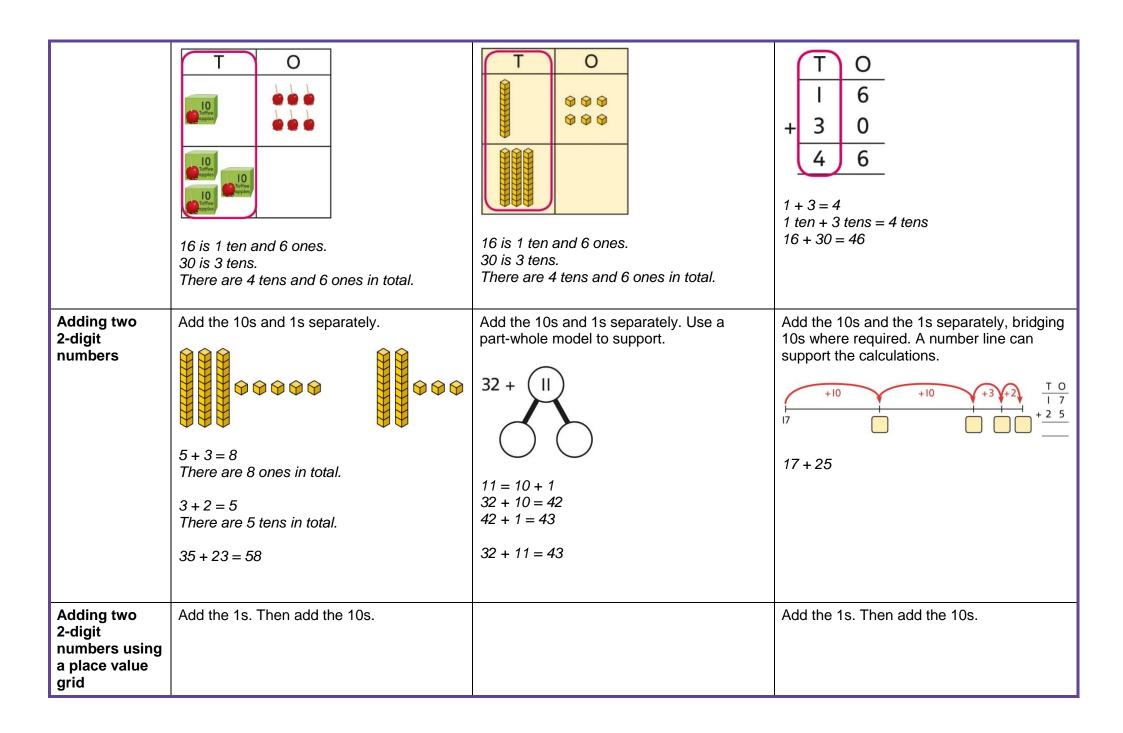

Sharing

10 shared into 2 equal groups gives 5 in each group.

		Year 2	
	Concrete	Pictorial	Abstract
Year 2 Addition			
Understanding 10s and 1s	Group objects into 10s and 1s. Bundle straws to understand unitising of 10s.	Understand 10s and 1s equipment, and link with visual representations on ten frames.	Represent numbers on a place value grid, using equipment or numerals. Tens Ones 3 2 Tens Ones 4 3
Adding 10s	Use known bonds and unitising to add 10s. I know that 4 + 3 = 7. So, I know that 4 tens add 3 tens is 7 tens.	Use known bonds and unitising to add 10s. ###################################	Use known bonds and unitising to add 10s. $4 + 3 = 4 + 3 = 7$ $4 tens + 3 tens = 7 tens$ $40 + 30 = 70$
Adding a 1-digit number to a 2-digit	Add the 1s to find the total. Use known bonds within 10.	Add the 1s.	Add the 1s. Understand the link between counting on and using known number facts. Children

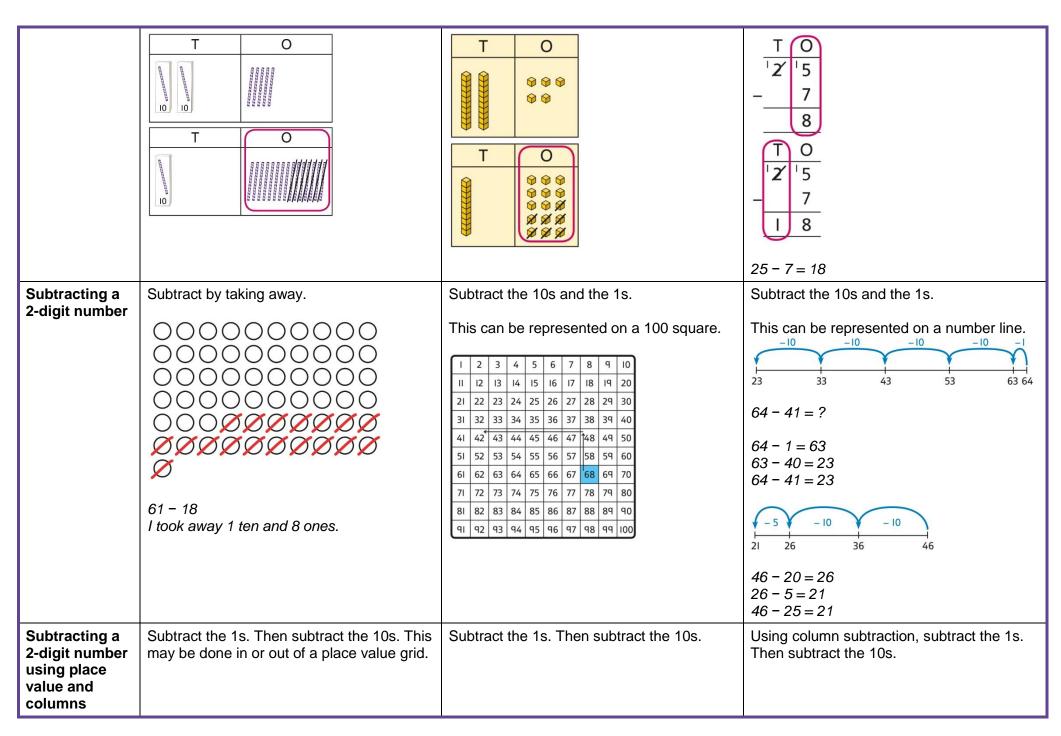

number not bridging a 10	41 is 4 tens and 1 one. 41 add 6 ones is 4 tens and 7 ones. This can also be done in a place value grid.	+	should be encouraged to use known number bonds to improve efficiency and accuracy. 30 31 32 33 34 35 36 37 38 39 40 This can be represented horizontally or vertically. $34 + 5 = 39$ or T O 3 4 + 5 q
Adding a 1-digit number to a 2-digit number bridging 10	There are 4 tens and 5 ones. I need to add 7. I will use 5 to complete a 10, then add 2 more.	Complete a 10 using number bonds.	Complete a 10 using number bonds. 7 5 2 43 44 45 46 47 48 49 50 51 52 53 7 = 5 + 2 45 + 5 + 2 = 52
Adding a 1-digit number to a 2-digit number using exchange	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten.	Exchange 10 ones for 1 ten.

			T O 2 4 + 8
Adding a multiple of 10	Add the 10s and then recombine.	Add the 10s and then recombine.	Add the 10s and then recombine.
multiple of 10 to a 2-digit number	27 is 2 tens and 7 ones. 50 is 5 tens. There are 7 tens in total and 7 ones. So, 27 + 50 is 7 tens and 7 ones.	66 is 6 tens and 6 ones. 66 + 10 = 76 A 100 square can support this understanding. 1 2 3 4 5 6 7 8 9 10 1 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 35 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 75 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 91 91 91 91 90 90 91 91 91 91 91 91 90 91 91 91 91 91 91 91 91 91	37 + 20 = ? $30 + 20 = 50$ $50 + 7 = 57$ $37 + 20 = 57$
Adding a multiple of 10 to a 2-digit number using columns	Add the 10s using a place value grid to support.	Add the 10s using a place value grid to support.	Add the 10s represented vertically. Children must understand how the method relates to unitising of 10s and place value.

	Tens Ones Tens Ones Tens Ones Tens Ones Tens Ones		TO 3 2 + 1 4 6 TO 3 2 + 1 4 4 6
Adding two 2-digit numbers with exchange	Add the 1s. Exchange 10 ones for a ten. Then add the 10s. Tens Ones q Tens Ones q Tens Ones q Tens Ones		Add the 1s. Exchange 10 ones for a ten. Then add the 10s. TO 3 6 +2 9 6 5
Year 2 Subtraction			
Subtracting multiples of 10	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.

i			
		100	7 70 70 2 5 20 50
	8 subtract 6 is 2. So, 8 tens subtract 6 tens is 2 tens.	10 - 3 = 7 So, 10 tens subtract 3 tens is 7 tens.	7 tens subtract 5 tens is 2 tens. 70 - 50 = 20
Subtracting a single-digit number	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. Understand the link between counting back and subtracting the 1s using known bonds.

Year 2 Multiplication			
Equal groups and repeated addition	Recognise equal groups and write as repeated addition and as multiplication.	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication.	Use a number line and write as repeated addition and as multiplication.

	3 groups of 5 chairs 15 chairs altogether	3 groups of 5 15 in total	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition. 4 groups of 5 5 groups of 5	Understand the relationship between arrays, multiplication and repeated addition. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
Understanding commutativity	Use arrays to visualise commutativity. I can see 6 groups of 3. I can see 3 groups of 6.	Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication. This is 2 groups of 6 and also 6 groups of 2.	Use arrays to visualise commutativity. $4+4+4+4+4=20$ $5+5+5+5=20$ $4\times 5=20 \text{ and } 5\times 4=20$
Learning ×2, ×5 and ×10 table facts	Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.	Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.	Understand how the times-tables increase and contain patterns.

		00000000	10
